Review Cycle: Review Cycle (Jun 2025)
Employee ID: 674
Employee Designation: Senior Software Engineer
Date Of Joining: 25 October, 2017

Self Review - Muhammad Junaid Khan

Please list what you consider to be your most successful job accomplishments for the past six months in the following areas; *
a) Customer / Client Centric accomplishments or initiatives
b) Teamwork & Collaboration
c) Technical Knowledge & Expertise
d) Contribution toward the values of the organization

a) Customer / Client Centric accomplishments or initiatives:

Over the past six months, I have continued to deliver high-impact work that contributed to client success:

- Delivered multiple production releases under tight deadlines, including weekend deployments — all completed smoothly without major bugs or post-release issues.
- Proactively addressed urgent client-reported issues and incorporated critical feedback in a timely manner, maintaining strong client trust.
- Took ownership of frontend (AngularJS + Angular latest) and backend (Python Flask) development, ensuring seamless, end-to-end delivery.
- In the absence of QA resources, set up automation testing using Docker on my machine, generated test reports for the client, and created detailed documentation for various automation scenarios.
- Delivered full-stack features on time with high quality and minimal downtime, supporting client satisfaction.
- Regularly engaged with clients for estimations, planning, and demos, ensuring alignment with their evolving needs.
- Independently migrated several major modules — including Broadcast Messaging, Universal Table, and the Nested Tree Loading feature — without assistance from other team members.
- The Nested Tree Loading feature involved a highly complex structure with multi-level (n-level) nested nodes, and the initial version had significant performance and loading issues. I analyzed the root causes and implemented optimization techniques to improve load times and overall responsiveness.
- Successfully implemented the optimized tree loading logic first in AngularJS, and then migrated the same functionality to latest Angular versions.
- Revamped multiple modules to the latest version of Angular while maintaining the same backend structure — this ensured a smoother migration process, minimized regression risks, and helped the team maintain delivery velocity while modernizing the front end.

b) Teamwork & Collaboration:

- Maintained consistent communication with the team through Teams and JIRA, providing regular updates and addressing technical queries.
- Collaborated across time zones to ensure smooth project progress, taking initiative to unblock others when needed.
- Mentored junior team members on automation, DevOps, and full-stack practices.
- Facilitated learning within the team by conducting knowledge-sharing sessions on Agentic AI, n8n workflows, and automation tools.
- Supported collaboration with non-dev teams (QA, IT) to ensure smooth project execution and delivery.

c) Technical Knowledge & Expertise:

- Demonstrated full-stack expertise by independently delivering features across AngularJS, Angular latest, and Python Flask.
- Set up and documented automation test frameworks with Docker, providing value in the absence of dedicated QA resources.
- Balanced maintenance of legacy SmartOrg AngularJS systems with modernizing components in newer Angular versions.
- A key accomplishment was independently handling all CSS and UI-related tasks across the system, significantly enhancing the overall user experience without any external support. I developed reusable components, Angular pipes and directives, reusable dialogs, and utility classes to help refactor and scale the system effectively, while maintaining strong code integrity and visual consistency
- Took the lead in emerging technologies — completing Agentic AI POC, delivering internal sessions on no-code automation, and driving a Voice AI Agent POC to successful demo within a week without prior knowledge of agentic voice agents where I provided technical estimation, conducted in-depth research on Generative AI and Voice AI Agent frameworks, and implemented an intelligent, real-time AI-powered customer service and doctor appointment booking agent.
- Displayed strong problem-solving skills by ensuring seamless releases during challenging deadlines.

d) Contribution toward the values of the organization:

- Delivered consistent high-quality solutions under pressure, reflecting the organization’s commitment to excellence.
- Actively contributed to innovation through AI Special Interest Group participation and POC leadership.
- Mentored colleagues, promoted continuous learning, and shared expertise across the team.
-

Maintained a client-first mindset, proactively addressing their priorities and delivering features aligned with business needs.

- Participated in company initiatives, including AI workshops, Generative AI Hackathon, and Agentic AI SIG, reinforcing a culture of learning and innovation.
- Additionally, I actively contributed to our workplace culture as a member of ECC helping organise initiatives that foster engagement, teamwork, and a positive work environment.

Please describe your progress on goals from last review? *

Over the past review period, I expanded my role from strong full-stack development into driving broader technical initiatives across the project and actively advancing my learning in AI.

AI Initiatives & Learning: Deepened my work in the AI SIG, explored Agentic AI and no-code frameworks (n8n), delivered multiple POCs, and led a Voice AI Agent POC completed in under a week. Participated in AI workshops and hackathons to further strengthen my AI skills.

Angular Best Practices: Migrated complex modules (Broadcast Messaging, Universal Table, Nested Tree Loading) from AngularJS to latest Angular, optimised performance, and implemented modern UI patterns and reusable components to improve scalability and maintainability.

Automation & DevOps: Set up Docker-based automation testing in the absence of QA, documented automation flows, and supported smoother, higher-quality releases.

Full-Stack Delivery: Consistently delivered full-stack features (AngularJS, Angular latest, Python Flask) on tight deadlines, including weekend releases, with stable production outcomes.

Collaboration & Mentoring: Conducted internal sessions on AI tools and automation, mentored junior team members, and supported team collaboration across development, QA, and IT.

Please list your key strengths: *

Initiatives:

Over the past review period, I expanded my role beyond strong full-stack development by taking on broader technical initiatives — including independently migrating complex modules to the latest Angular versions, optimizing system performance (e.g. nested tree loading), and setting up Docker-based automation frameworks. Additionally, I advanced my AI/ML learning by contributing to Agentic AI POCs, participating in AI hackathons and workshops, and leading internal learning sessions — helping drive AI innovation within the team.

Leadership:

I demonstrated leadership by owning end-to-end delivery of critical modules (Filtering, Broadcast Messaging), leading complex migrations, and delivering stable production releases under tight deadlines — including weekend releases. I also led the execution of a Voice AI Agent POC, managing estimations, coordinating a resource, and completing the project successfully within a short time frame.

Commitment / Dedication:

I consistently committed to delivering high-quality outcomes — taking ownership of automation in the absence of QA, ensuring smooth client releases with minimal issues, and frequently going above expectations (e.g. weekend production support). I proactively contributed to organizational learning by conducting Generative AI sessions, and through active participation in the AI Special Interest Group.

Problem-Solving Skills:

I demonstrated strong problem-solving by optimizing complex structures like nested tree loading to resolve performance issues, and by independently managing challenging legacy-to-modern migrations while maintaining backend compatibility. My work in automation testing and AI POCs also involved identifying innovative solutions to improve team efficiency and product quality.

Job Knowledge:

Over this period, I strengthened my expertise in AngularJS, modern Angular, Python Flask, Docker-based automation, and AI/ML technologies. My growing knowledge in Agentic AI, automation, and system architecture allows me to contribute both in technical depth and cross-functional innovation.

Communication:

I maintained clear and consistent communication with clients (for estimations, demos, requirement discussions) and internal teams via Teams and JIRA. I also contributed to knowledge-sharing across the team through AI sessions, automation workshops, and mentoring of junior developers — promoting a collaborative and growth-focused environment.

What will you start doing, as a future focus, in the following areas of your job; *
a) Customer / Client Centric accomplishments or initiatives.
b) Teamwork & Collaboration
c) Technical Knowledge & Expertise
d) Contribution toward the values of the organization

a) Customer / Client Centric accomplishments or initiatives:

Going forward, I plan to deepen my involvement in client discussions earlier in the project cycle — contributing more actively to solution design and proactively identifying areas where AI and automation can add value to their business processes. I also aim to help standardize and streamline deployments to further improve the client experience during releases

b) Teamwork & Collaboration:

I will focus on taking a stronger mentorship role, especially for newer team members, helping them ramp up more quickly on both legacy and modern tech stacks. Additionally, I plan to collaborate more closely with cross-functional teams (QA, DevOps, IT) to ensure smoother handoffs and even more cohesive delivery.

c) Technical Knowledge & Expertise:

I will continue to deepen my expertise in AI/ML, with a focus on Agentic AI frameworks, and explore opportunities to bring more AI-driven capabilities into our core products. I also plan to further refine my skills in advanced Angular architecture, automation frameworks, and DevOps best practices to contribute to the project's scalability and performance.

d) Contribution toward the values of the organization:

I will continue contributing to a culture of innovation and learning — not only by participating in AI SIG activities but also by proposing and driving new AI and automation POCs that align with our business goals. Additionally, I aim to actively promote teamwork and knowledge-sharing across teams, supporting the organization's collaborative and growth-oriented values.

How can your manager help you improve these areas? *

I am working on further developing my leadership, commitment, and technical expertise to reach an expert level. I also aim to support our clients by helping them solve complex challenges and delivering consistent, high-quality results. My line manager has been very supportive, guiding me in areas for improvement and providing valuable mentorship that motivates me to continuously grow. I truly appreciate the open environment he creates, where I feel comfortable discussing challenges or concerns.

Going forward, continued feedback and mentorship from my manager especially in areas like leadership growth, AI initiatives, and client engagement — would further help me contribute at a higher level.

He is also mentoring me for my Lead promotion case.

In the next six months, what are your expectations and plans in the following areas; *

a) Career Growth (Promotion wise).
b) Learning Goals.
c) Personal Goals (Financial or non-financial, relocation, education etc).

Highlight the criticality of your goal by writing high/medium at the end of each goal.

a) Career Growth (Promotion wise):

Over the next six months, I aim to continue growing into a Lead Software Engineer role. I plan to further strengthen my leadership by driving key technical initiatives, contributing to architectural decisions, mentoring junior team members, and increasing my impact on project delivery and client success.

b) Learning Goals:

I will continue expanding my expertise in AI/ML, focusing more deeply on Agentic AI and advanced AI-driven automation. I also plan to refine my skills in modern Angular architecture, DevOps best practices, and emerging AI integration frameworks — so I can help bring more innovation to both client projects and internal processes.

c) Personal Goals (Financial or non-financial, relocation, education etc):

My personal goals include continuing to develop my leadership and technical skills so I can move into higher-level roles. Financially, I aim to increase my contributions and growth within the company, which will support my personal milestones. I also plan to stay active in AI communities and pursue self-learning (online courses, workshops) to remain current in both full-stack and AI technologies.

How can Folio3 help you achieve these goals? *

Folio3 has played a crucial role in helping me achieve both my technical and financial goals, and I truly value the supportive work environment it fosters. The mentors here provide exceptional guidance, openly share their knowledge and experiences, and continually motivate us to work toward our long-term aspirations.

My project manager has been especially helpful in identifying areas for improvement, and I am actively working on the feedback and suggestions provided.

I also greatly appreciate the Folio3 learning programs they are incredibly valuable in helping us learn, improve, and grow. I am grateful for these opportunities and look forward to continuing to learn and contribute through them.

Folio3 provides great opportunities to enhance our learning, especially in emerging areas like AI and Agentic AI. The company promotes continuous learning through its Learning Management System (LMS), regular AI-focused sessions, and hackathons. They place strong emphasis on helping us grow our technical skills and stay current with industry trends, which I truly appreciate and find very motivating.

Please share (with examples) if you have used Gen AI or AI related tool to improve productivity and quality of your work. *

I have actively used Generative AI and AI tools to improve both my productivity and the quality of my work.

I completed several AI courses through the Folio3 learning portal:

- Introduction to Generative AI for Software Development
- Generative AI: Prompt Engineering For Everyone
- ChatGPT Prompt Engineering for Developers

Additionally, I am progressing through other AI/Agentic AI courses, including CrewAI and other advanced modules. Beyond formal learning, I have been exploring no-code Agentic AI tools such as n8n and Make.com, and have delivered company-wide sessions to help both technical and non-technical staff learn how to build their own AI agents using these platforms. I also served as a speaker in the Summer Internship Program, promoting the vision of "AI for everyone."

I also led a Voice AI Agent POC, where I provided technical estimation, conducted in-depth research on Generative AI and Voice AI Agent frameworks, and implemented an intelligent, real-time AI-powered customer service and doctor appointment booking agent — capable of handling phone calls directly via SIP/telephony integration. The solution was designed, developed, and successfully demonstrated within a week, highlighting the potential of Agentic AI to transform real-world customer interactions

In my daily development work, I use Cursor IDE and Cursor AI agent for coding, which has significantly improved my speed and productivity, especially when working across complex full-stack tasks.

Overall, these AI tools and initiatives have greatly improved both my efficiency and the quality of my deliverables, while also helping drive AI adoption across the company.

I actively explore and utilize tools like GitHub Copilot, Gemini, MidJourney, Leonardo AI, Ideogram, image generation and Claude.ai to optimize various aspects of my workflow.
